Early Career Opportunities at JMP, a Subsidiary of SAS

JMP (www.jmp.com) aims to promote and enable the notion of 'Statistical Discovery' as a means of fostering data-driven decision making and innovation in Engineering and Science. To do this we leverage a blend of knowledge ranging from statistical methods, data science, information technology, programming and application development, through to industry and application knowledge. We also work hard to develop the interpersonal skills required to successfully pursue this agenda and effect change in our customers, and place particular value on curiosity and technical competence.

If you are a recent graduate in the broad area of chemical engineering, biotechnology and associated areas, have a affinity for working with data, and want to gain significant experience in a knowledge-based industry, please contact ian.cox@jmp.com. Appointments would be for twelve months in the first instance.
